

COPY-READY PROMPTS FOR GOOGLE AI STUDIO / GOOGLE STUDIO

Website Prompt Playbook For Portfolio & Business Websites

Two copy-ready prompts to collect requirements and generate a detailed website-building prompt for Google AI Studio / Google Studio.

What this PDF contains

1. A requirement collector prompt.
2. A final master prompt generator for Google Studio.
3. A simple workflow so you can create portfolio or business websites with better structure, content, design, and animations.

How to Use This Document

This playbook is designed for a simple two-step workflow. First, use Prompt 1 to collect all requirements for a portfolio or business website. Then, use Prompt 2 with those answers to create one large website-generation prompt for Google AI Studio / Google Studio.

Step 1	Copy Prompt 1 and paste it into ChatGPT or any AI assistant. Answer the questions it asks.
Step 2	After your requirement summary is ready, review it and confirm it.
Step 3	Copy Prompt 2 and paste your confirmed requirement summary where instructed.
Step 4	Use the generated master prompt inside Google AI Studio / Google Studio to create your website.
Step 5	Review the website, replace images and links, test it on mobile, and deploy it.

Best Practice

Do not paste a vague request like "make me a portfolio". Better websites come from better requirements: audience, goal, tone, sections, CTA, visuals, animations, content, and technical stack.

Copy Tip

When copying from the PDF, copy only the prompt text under each prompt heading. Replace bracketed placeholders before using Prompt 2.

Prompt 1: Requirement Collector

Use this prompt first. It will ask the right questions for a portfolio, business, agency, startup, service, product, or creator website.

PROMPT 1 - WEBSITE REQUIREMENT COLLECTOR

Act as a senior product strategist, website consultant, brand consultant, UI/UX designer, and conversion-focused copywriter.

I want to create a modern website for either my portfolio or my business. Before creating any website prompt, ask me the right questions and collect all important requirements.

Your job is to interview me step by step and understand exactly what kind of website I need.

Ask me questions in these sections:

1. Website Type

- Is this website for a personal portfolio, business, agency, startup, product, service, creator brand, freelancer profile, or something else?
- What is the main goal of this website?
- Do I want visitors to contact me, book a call, buy something, view my work, download my resume, join a waitlist, or trust my brand?

2. Brand Identity

- What is the website or brand name?
- What tagline or one-line description should appear on the website?
- What personality should the website have: premium, bold, friendly, corporate, minimal, futuristic, luxury, creative, playful, serious, or professional?
- Do I have brand colors, logo, fonts, or should you suggest them?

3. Target Audience

- Who will visit this website?
- Are they recruiters, clients, customers, investors, business owners, students, creators, or general users?
- What problem does this audience have?
- Why should they trust me or my business?

4. Content and Sections

Ask me what sections I want, and also suggest sections based on the website type.

Possible sections:

- Hero section
- About section
- Services section
- Portfolio / Projects section
- Case studies
- Skills / Tech stack
- Testimonials
- Pricing
- Process / How it works
- Blog / Resources
- FAQ
- Contact form
- Social links
- Resume download
- Call booking button
- Newsletter / lead magnet

5. Portfolio Specific Questions

If it is a portfolio website, ask:

- What is my role or profession?
- What skills should be highlighted?
- What projects should be shown?
- For each project, ask for title, description, tech stack, result, links, screenshots, and key achievements.
- Should the website include resume download, GitHub, LinkedIn, email, YouTube, Instagram, or other links?
- What kind of job or clients am I targeting?

6. Business Specific Questions

If it is a business website, ask:

- What product or service do I offer?
- What are the main benefits?
- What makes this business different from competitors?
- What pain points does the business solve?
- What call-to-action should be used?
- Do I need pricing, packages, testimonials, case studies, booking form, WhatsApp button, or payment button?

7. Visual Design Preference

Ask me about the design style:

- Dark mode, light mode, or both?
- Minimal, glassmorphism, neumorphism, luxury, startup SaaS, portfolio, corporate, editorial, cyberpunk, or creative agency style?
- Should it include animations?
- Should it include floating cards, 3D elements, gradients, scroll effects, reveal animations, cursor glow, or parallax?
- Should it look like Apple, Stripe, Linear, Vercel, Notion, Framer, or another design inspiration?

8. Functionality

Ask what functionality is needed:

- Contact form
- Booking link
- WhatsApp button
- Email link
- Resume download
- Project filtering
- Blog pages
- Admin panel
- Payment integration
- Newsletter
- Login/signup
- Dashboard
- Multi-language support

9. Technical Preference

Ask:

- Should the website be created in React, Next.js, HTML/CSS/JS, Tailwind CSS, or any other technology?
- Should it be a single-page website or multi-page website?
- Should it be optimized for SEO?
- Should it be ready to deploy on Vercel, Netlify, GitHub Pages, or another platform?

10. Copywriting and Content Tone

Ask:

- Should the content be written in professional, friendly, premium, bold, humorous, simple, emotional, or corporate tone?
- Do I already have content, or should you generate polished content?
- Should the website include strong headings, punchy one-liners, social proof, and conversion-focused CTAs?

11. Final Clarification

After asking the questions, organize my answers into a clean requirement summary with these headings:

- Website Goal
- Website Type
- Brand Details
- Target Audience
- Required Sections
- Content Needed
- Visual Style
- Animations
- Functional Requirements
- Technical Requirements
- CTA Strategy
- SEO Requirements
- Final Notes

After collecting everything, ask me to confirm the summary.
Then tell me to use the confirmed summary with the next prompt to generate the final Google Studio website prompt.

Important:

- Do not create the final website prompt yet.
- First collect requirements clearly.
- Ask questions in a friendly and structured way.
- If I give incomplete answers, ask follow-up questions.
- If I am unsure, suggest best options based on modern website standards.

Prompt 2: Final Google Studio Prompt Generator

Use this after you have a confirmed requirement summary from Prompt 1. Paste the summary into the placeholder inside this prompt.

PROMPT 2 - FINAL GOOGLE STUDIO WEBSITE PROMPT GENERATOR

Act as a world-class website strategist, UI/UX designer, frontend architect, creative director, brand copywriter, SEO expert, and conversion optimization specialist.

I will provide you my website requirement summary below. Your job is to convert that information into one large, detailed, production-ready prompt that I can paste into Google AI Studio / Google Studio to generate a complete modern website.

Here is my requirement summary:

[PASTE THE CONFIRMED REQUIREMENT SUMMARY FROM PROMPT 1 HERE]

Now create one big master prompt for Google Studio that generates the complete website.

The final prompt must include all of these details:

1. Website Goal

Clearly explain the purpose of the website and what the user should feel or do after visiting it.

Mention the primary CTA and secondary CTA.

Make sure the website is built for conversion, trust, visual quality, and responsiveness.

2. Brand Direction

Define the brand mood, personality, tone, colors, typography style, spacing style, and overall visual identity.

If colors are not provided, suggest a premium color palette based on the website type.

If typography is not provided, suggest modern font pairing ideas.

3. Full Website Structure

Create a complete section-by-section website layout.

For each section, define:

- Section name
- Purpose of the section
- Heading
- Subheading
- Suggested content
- Visual design idea
- Animation idea
- CTA if needed

Possible sections may include:

- Announcement bar
- Navbar
- Hero section
- Trust badges
- About section
- Services section
- Portfolio / Projects section
- Case studies
- Skills / Tech stack
- Process section
- Testimonials
- Pricing / Packages
- FAQ
- Contact section
- Footer

Only include sections that make sense for the requirement summary.

4. Hero Section

Create a strong hero section instruction.

It should include:

- Powerful headline
- Clear subheadline
- Primary CTA
- Secondary CTA
- Visual element idea
- Trust/social proof line
- Background style
- Animation style

The hero should immediately communicate what the person or business does and why visitors should care.

5. Content Writing Instructions

Tell Google Studio to generate polished website copy based on the requirement summary.

The copy should be:

- Clear
- Professional
- Modern
- Benefit-driven
- Trust-building
- Easy to read
- SEO-friendly
- Conversion-focused

Avoid generic placeholder content. Use realistic copy based on the brand, services, projects, or business details.

6. Visual Design Requirements

The website should look modern, premium, and highly polished.

Include instructions for:

- Responsive layout
- Clean spacing
- Card-based design
- Floating cards
- Smooth gradients
- Glassmorphism or soft shadows if suitable
- High-quality icons
- Modern buttons
- Section dividers
- Background patterns
- Subtle noise texture
- Strong visual hierarchy
- Professional image placeholders

If dark mode is requested, create a sleek dark theme.

If light mode is requested, create a premium clean light theme.

If both are requested, include a dark/light toggle.

7. Animation and Interaction Requirements

Include modern animations such as:

- Smooth page load animation
- Scroll reveal animation
- Floating cards
- Parallax background elements
- Animated counters
- Hover effects on cards and buttons
- Cursor glow if suitable
- Micro-interactions on form inputs
- Smooth navbar transition
- Mobile menu animation

Animations must be smooth, professional, and not distracting.

Respect reduced-motion accessibility preferences.

8. Portfolio Website Instructions

If this is a portfolio website, include:

- Personal introduction
- Role and expertise
- Skills section
- Project cards
- Project detail modals or links

- Resume download button
- GitHub / LinkedIn / email links
- Achievement highlights
- Testimonials or recommendations if available
- Contact section for recruiters or clients
- Strong CTA such as Hire Me, View Resume, or Book a Call

Project cards should include:

- Project title
- Short description
- Tech stack
- Problem solved
- Impact/result
- Links to live demo or GitHub if available

9. Business Website Instructions

If this is a business website, include:

- Business value proposition
- Services or product offering
- Benefits and outcomes
- How it works / process
- Why choose us section
- Testimonials or social proof
- Pricing/packages if needed
- FAQ
- Lead generation contact form
- CTA such as Book a Call, Get Quote, Contact Us, Start Project, or Buy Now

Business copy should focus on customer problems, benefits, credibility, and conversion.

10. Technical Implementation Requirements

Ask Google Studio to generate clean, production-ready code.

Preferred stack based on summary:

- React or Next.js if requested
- Tailwind CSS for styling
- Framer Motion for animations if available
- Responsive components
- Clean folder/component structure
- Reusable components
- Accessible HTML
- SEO metadata
- Fast loading design
- Optimized images/placeholders

If technology is not specified, ask it to use React + Tailwind CSS + Framer Motion.

11. Responsive Requirements

The website must work perfectly on:

- Desktop
- Laptop
- Tablet
- Mobile

Define responsive behavior:

- Navbar becomes hamburger on mobile
- Hero stacks vertically on mobile
- Cards become one column on mobile
- Buttons are thumb-friendly
- Text remains readable
- Images scale properly
- No horizontal scroll

12. Accessibility Requirements

Include:

- Semantic HTML
- Proper heading hierarchy
- Keyboard-friendly navigation
- Good color contrast
- Labels for form fields
- Alt text for images
- Focus states

- Reduced-motion support

13. SEO Requirements

Include:

- SEO title
- Meta description
- Open Graph tags if possible
- Keyword-friendly headings
- Clean page structure
- Fast loading
- Descriptive links

14. Contact and Lead Generation

Create a polished contact section.

Depending on requirements, include:

- Contact form
- Email link
- Phone/WhatsApp link
- Social links
- Booking link
- Location if applicable
- Success message after form submit

15. Footer

Create a professional footer with:

- Brand name
- Short description
- Navigation links
- Contact info
- Social links
- Copyright line
- Optional privacy/terms links

16. Output Format

The generated website should be complete and ready to run.

Ask Google Studio to provide:

- Full code
- Clean component structure
- Setup instructions
- Where to replace text/images/links
- Deployment suggestions if possible

17. Quality Bar

The final website should not look like a basic template.

It should feel premium, modern, polished, responsive, and suitable for a real personal brand or business.

It should have strong copy, beautiful visuals, smooth animations, and clear conversion flow.

Now generate the final master prompt only.

Make it detailed enough that Google Studio can create the full website from it.

Do not create the website code yourself.

Only create the final website-generation prompt.

Final Checklist Before Generating the Website

Before pasting the final master prompt into Google Studio, make sure these items are clear. This will help the AI create a more accurate and professional website.

- Website type is clear: portfolio, business, agency, startup, product, or creator brand.
- Primary goal is clear: contact, book call, hire me, view projects, buy, join waitlist, or generate leads.
- Target audience is defined.
- Brand tone and visual style are selected.
- Required sections are listed.
- CTA buttons are finalized.
- Animations are described clearly.
- Technology preference is selected.
- Mobile responsiveness is required.
- SEO and accessibility requirements are included.

Recommended Default Stack

If you are unsure about the technology, ask for React + Tailwind CSS + Framer Motion. This combination is excellent for modern responsive websites with smooth animations.

End of Document

Use the two prompts as a repeatable system whenever you want to create a new portfolio, business, product, or service website.
